

Hydreon

ANDROID FIELD APP

The field day, in your pocket.

Technicians and station officers run routes, inspections, and defects on phone and tablet — with offline map packs when coverage drops. Evidence writes back to the same register the desk uses.

A field day with Hydreon

01 • Claim the route

Self-assign or take a team route. Start from GPS when you're on the ground.

02 • Navigate stops

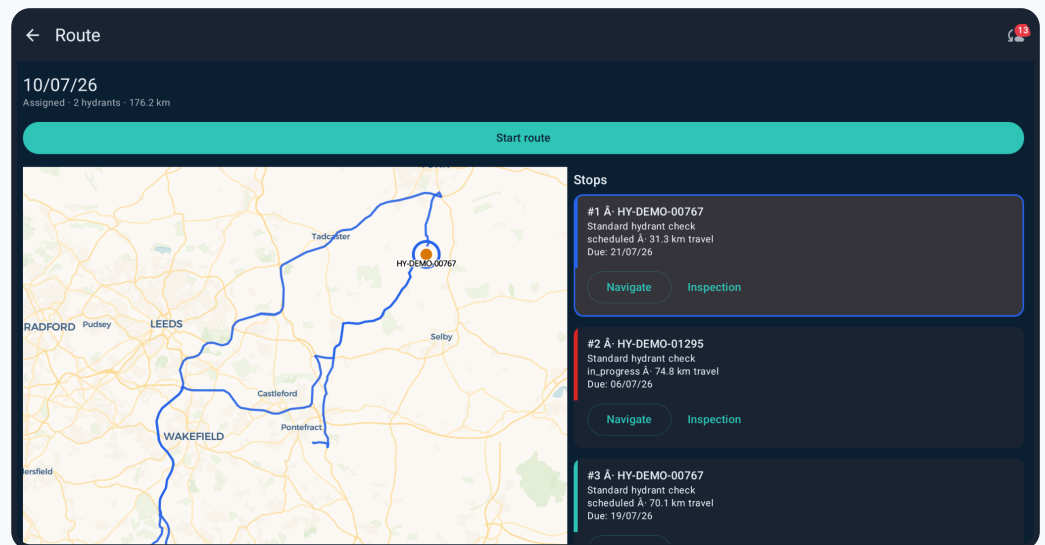

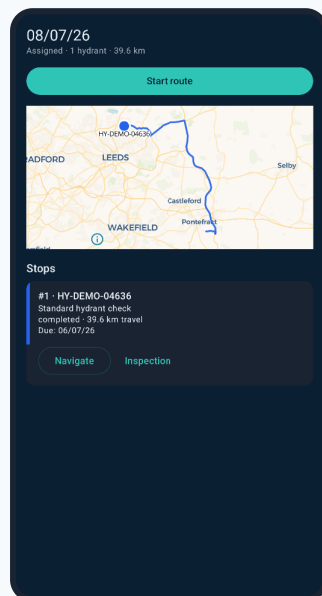

Inspection, remediation, and flow-test stops ordered for the road network.

03 • Inspect & remediate

Checklists, photos, defects and remediations captured at the hydrant.

04 • Sync when back

Work offline from map packs; sync when signal returns — no re-keying at station.

Android phone and tablet today. iOS is not available yet.

Put Hydreon in the appliance bay

Demo the Android workflow alongside desk planning.

Keep working when the signal doesn't

Rural grounds and underground stops shouldn't stop the day. Offline map packs and deferred sync keep field capture moving — then the desk and partner views catch up automatically.

- **Offline map packs** — Push packs to devices so maps and assets stay usable without live connectivity
- **Capture without signal** — Inspections, defects, and remediations stay on device until sync
- **One register** — Sync writes back to the same hydrant record ops use on the desk
- **Phone + tablet** — Same Android app; tablet for map-led work, phone for stop-by-stop capture
- **Live when online** — On-shift / on-route visibility when connectivity is available

Field app is Android-only. Pair with the web desk for planning, compliance, and partner exports.

The screenshot displays the 'Inspection' screen in the Hydreon field app. At the top, there's a back arrow and the title 'Inspection'. Below this is a unique identifier 'c86afc95' and a 'Completed' status badge. A 'Checklist' section follows, containing three items: 'Above ground condition' (Required, status: FAIL), 'Outlet caps' (Required, status: PASS), and 'Signage' (Required, status: PASS). Each item has a dropdown arrow. Below the checklist is a 'Hydrant defects' section showing a 'Failed: Above ground condition' with a status of 'awaiting undertaker'. The final section is 'Your remediations', which shows a 'Fix: Failed: Above ground condition' with a status of 'in progress'.
