

Hydreon

FOR UK FIRE & RESCUE

Hydrant risk, under control.

One platform for hydrant assets, inspections, road-smart routes, and defect handoff with water partners — from desk map to Android field.

Platform at a glance

Replace paper and spreadsheets with a spatial register, compliance views, and workforce days that respect the road network.

Map & assets

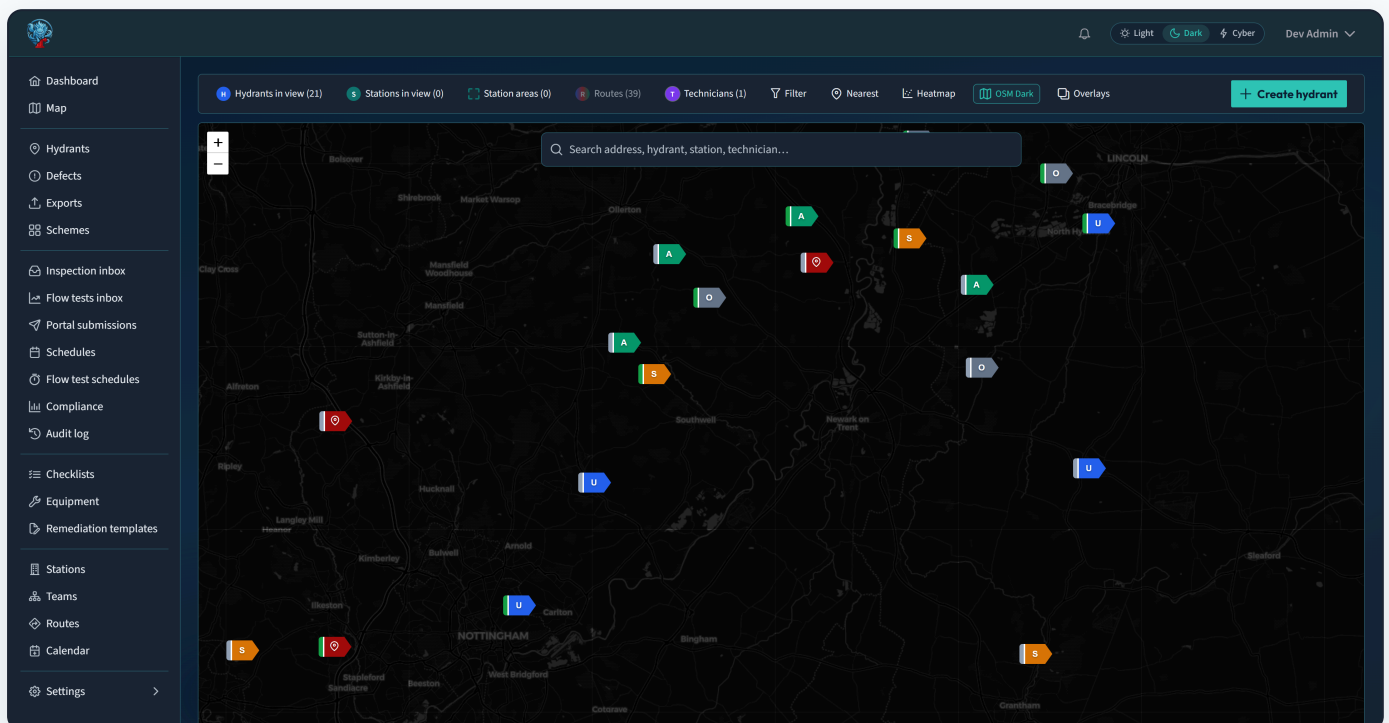

Every hydrant on the map — risk, due work, coverage, OS basemaps, and full asset history.

Inspect & remediate

Configurable checklists, schedules, photo evidence, and a clear defect loop with undertakers.

Route to the field

Build day and week routes from what's due; assign teams; track technicians on shift.

Web desk · Android phone & tablet · Water company portal · Integration API

See it on your ground

HOW IT FLOWS

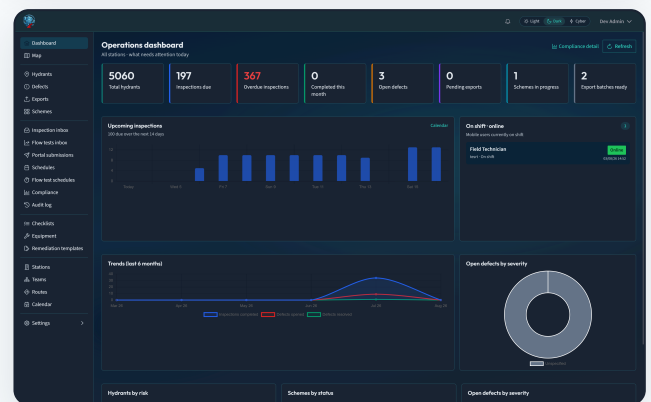

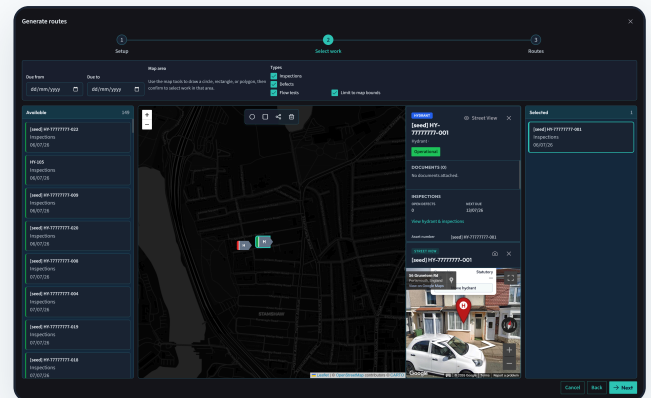

Register → Schedule → Route → Capture → Export

Desk and field share one asset truth. Partners get a controlled window — not another spreadsheet.

- **Register** — Spatial hydrant assets with ownership, status, and history
- **Schedule** — Inspections and due work against your checklists
- **Route** — Road-network travel times; assign to teams or technicians
- **Capture** — Android evidence and defects, including offline map packs
- **Export** — Portal, CSV templates, or Integration API for undertakers

Who uses it

- **Admin** — Stations, users, mapping, integrations
- **Station officer** — Desk ops + field (web & mobile)
- **Technician** — Routes, inspections, defects on Android
- **Water company** — Portal map, defects, exports, API keys

Talk to us about your estate

Map, inspections, routes, and partner handoff — sized to your stations.
